

# Cross Segment Diamond Cup Wheel

Diamond cup wheel designed for grinding and polishing concrete, stone, and other hard materials. It features a durable steel body with diamond-impregnated segments and strategically placed holes for dust extraction and cooling.

## Product Overview

### High-Performance Grinding Solution

The Cross Segment Diamond Cup Wheel is engineered for aggressive material removal and efficient surface preparation. Featuring a durable steel body and diamond-impregnated segments, it is ideal for grinding and polishing concrete, stone, and other hard materials. The design includes strategically placed holes that facilitate effective dust extraction and cooling, ensuring consistent performance during coating removal or smoothing rough surfaces.

## Technical Specifications

### Primary Applications

- Surface preparation
- Coating removal
- Smoothing rough surfaces
- Grinding
- Polishing

Segment Configuration	Cross-shaped
Compatible Materials	Concrete, Stone, Hard Materials

## Design Features

Cooling & Dust Management	Yes
Body Material	Durable Steel
