

Cross-Shaped Industrial Component with Circular Opening

This dark-colored component features a cross-shaped design with a central circular opening. Each of the four extending arms has a rounded end and a series of smaller circular cutouts along the edges.

Product Overview

Industrial Cross-Shaped Component

This industrial cross-shaped component is engineered for precision integration within complex machinery or chemical processing systems. Featuring a unique four-arm design with a central circular opening, it is optimized to accommodate cylindrical elements like pipes or shafts. Its robust construction makes it a reliable structural or connecting element for demanding industrial environments.

Physical Characteristics

Arm Features

- Rounded ends
- Series of smaller circular cutouts along edges

Geometry

Cross-shaped with four extending arms

Central Opening

Circular, smooth, uniform

Application

Primary Applications

Chemical Processing, Industrial Machinery, Structural Connection
