

# CRT Television Circuit Board

This circuit board is designed for use in CRT televisions. The board handles power supply, signal processing, and deflection functions for the CRT display.

## Product Overview

### CRT Television Mainboard Assembly

This high-density electronic circuit board is engineered for CRT television applications, integrating power supply, signal processing, and deflection control functions. It features a robust assembly of capacitors, resistors, and integrated circuits, specifically designed to drive older display technologies. The board includes essential components such as a tuner module and a high-voltage transformer, making it a comprehensive solution for TV repair or specialized electronics integration.

## Technical Details

### Production Identifiers

Field	Identifier
Production Date	08.12.05
Serial Number	06491
Model Part A	S2170441
Model Part B	92010440
Internal Reference	2184A02

### Integrated Systems

**1 module**

Tuner Module

**1 unit**

High-voltage Transformer

**1 suction cup**

Anode Connection

### Component Configuration

Through-hole, Surface-mount, Integrated Circuits, Capacitors, Resistors, High-voltage Transformer
