

CRT Television Mainboard

This mainboard is commonly used in CRT televisions or monitors. It features a high-voltage section, a power supply, and signal processing circuitry.

Product Overview

Professional CRT Mainboard Assembly

This high-performance CRT mainboard is engineered for reliability and efficient signal processing in television and monitor applications. It features a robust architecture including a dedicated high-voltage section for CRT operation, an integrated power supply, and advanced signal processing circuitry. Designed for demanding environments, the board incorporates a large heatsink for optimal thermal management and multiple ribbon cable connectors for seamless integration into existing display systems.

Technical Specifications

Key Components

- Integrated signal processing circuitry
- Dedicated high-voltage section
- Integrated power supply unit
- High-capacity thermal heatsink
- Multi-connector interface for ribbon cables

Cooling System	Yes
-----------------------	-----

Compatibility

Compatibility	CRT Television, CRT Monitor
----------------------	-----------------------------
