

CRT TV Mainboard

This television mainboard processes and displays video signals. It includes a tuner, video processor, and microcontroller for system control.

Product Overview

Professional CRT Television Mainboard

The VCT4KS mainboard is a high-performance signal processing solution engineered specifically for CRT television systems. It integrates essential components for broadcast signal reception, video signal decoding, and robust system control management. Designed for reliability, the board features efficient thermal management and stable power regulation to ensure consistent image and sound quality.

Technical Specifications

Core Functional Modules

- Broadcast Signal Tuner
- Video Processor
- System Microcontroller
- Power Regulation Circuitry

Model Identifier	VCT4KS
Thermal Cooling	Yes

Compatibility

Compatible Display Technology	CRT Television
-------------------------------	----------------

Connectivity

I/O Interface Capabilities

- Audio Input
- Audio Output
- Video Input
- Video Output
