

# Crude Oil Salt Content Tester

This tester determines the amount of halide in crude oil and petroleum products. It can also estimate water turbine oil pollution and marine fuel oil.

## Product Overview

### Precision Salt Content Analysis

The Crude Oil Salt Content Tester is a specialized instrument engineered for the accurate determination of salt concentration in crude oil and petroleum products. Utilizing a conductivity-based method, this device ensures precise measurements essential for quality control in laboratory and field environments. Its robust design features a dual-cell configuration, which significantly enhances testing efficiency and throughput for professional applications.

## Technical Specifications

### Power Consumption

**600 W**

Electric Furnace Power

**300 W**

Extractor Heating Power (per unit)

### Compliance Standard

GB/T6532

### Power Supply

AC 220V ±10%, 50Hz
