

Currency Disinfection Cabinet with Triple Sterilization

This currency disinfection cabinet provides efficient sterilization of banknotes and paper-based valuables. It uses a triple sterilization system with dry heat, ozone, and ultraviolet light to eliminate harmful microorganisms.

ADDITIONAL IMAGES

Overview

Professional Triple-Sterilization Cabinet

This advanced disinfection cabinet utilizes a triple-action system combining UV light, ozone, and medium-temperature drying to ensure comprehensive sanitization. Designed for versatility, it safely handles items ranging from banknotes and books to protective clothing and tableware without causing damage. The unit features intelligent temperature control and a durable stainless steel construction, making it an ideal solution for maintaining hygiene in commercial environments.

Sterilization Technology

Mechanism Benefits

- UV light destroys germ structure to prevent breeding
- Ozone destroys germ cells for deep disinfection
- Dry heat prevents germ growth

Sterilization Methods

UV Sterilization, Ozone Sterilization, Medium Temperature Drying

Performance & Safety

Safety Features

Safety Door Control • Auto-Stop on Open • Intelligent Temp Control

Operating Temperature

65 °C

Construction

Material Composition

Stainless steel case and liner

Applications

Compatible Items

- Banknotes
- Books
- Masks
- Protective Clothing
- Tableware
