

Custom Battery Pack

This battery pack features a matrix of cylindrical cells within a supporting frame. It is engineered to deliver enhanced voltage or current for specific power demands.

Product Overview

Custom Battery Pack Solution

This custom-engineered battery pack is designed to deliver high-performance power for specialized applications. Featuring a matrix arrangement of cylindrical cells secured within a durable white plastic frame, this assembly provides both structural integrity and electrical insulation. The unit is pre-wired and ready for integration, offering increased voltage and current capacity compared to individual cell configurations.

Technical Specifications

Cell Configuration	Cylindrical matrix array
Housing Material	White plastic structural frame
Connection Interface	Pre-wired for direct integration

Features

Key Advantages	Custom Configuration, High Capacity, Integrated Insulation, Ready-to-Install
