

Custom Machined Metal Fittings

These custom metal fittings are precision machined to meet specific dimensional and material requirements. They are ideal for use in machinery, equipment, and other mechanical systems requiring reliable, custom-fit components.

Overview

Precision Machined Fittings

These custom machined metal fittings are engineered for high-performance industrial applications, offering reliability and durability for complex mechanical systems. Manufactured with advanced precision machining techniques, these components ensure exact dimensional accuracy and smooth finishes. They are ideal for integration into machinery, automotive systems, and heavy equipment requiring custom-fit, durable metal parts.

Manufacturing Capabilities

Production Equipment

Equipment Type	Capability
Laser Cutting	HanKwang Precision
Bending	AMADA (8T, 80T, 150T)
Punching	AMADA (35T, 45T)
Welding	Matsushita Robotics
Pressing	YH32-200A Hydraulic

Processing Methods

Sheet Metal Processing, Laser Cutting, Flame Cutting, Plasma Cutting, Mechanical Processing, Riveting, Welding

Applications

Suitable Applications

Auto Parts • Forklift Accessories • Air Conditioning Components • Elevator Parts • Industrial Machinery
