

Custom Stainless Steel Sheet Metal Fabrication

Custom fabrication of stainless steel sheet metal components to precise specifications. Services include laser cutting and forming for durable parts used in various applications.

Product Overview

Precision Sheet Metal Fabrication

This custom stainless steel sheet metal fabrication service provides high-precision components tailored to specific industrial requirements. Utilizing advanced laser cutting and CNC machining technology, the process ensures high efficiency, low costs, and consistent quality. Suitable for diverse applications, these durable, corrosion-resistant parts are manufactured to meet rigorous international standards for global enterprises.

Capabilities

Core Manufacturing Processes

- Laser cutting
- Sheet metal fabrication
- Riveting
- Welding

Production Equipment

15000 KW

Laser Cutting Power

6 m

Max Plate Shearing Length

Operational Details

Facility Area: 6000 sqm

Years of Operation: 16 years

Market Reach

Export Regions: Europe, America, Japan, Korea
