

Cutter Suction Dredger for Excavation

This cutter suction dredger is designed for dredging operations. It features a cutter head for breaking up soil and a suction system for removing dredged material.

Overview

High-Efficiency Excavation Solution

This cutter suction dredger is engineered for precise and reliable dredging operations in diverse underwater environments. It features a robust cutter head designed to effectively break up soil, paired with a powerful suction system for efficient material removal. Equipped with an integrated crane for versatile equipment handling, this vessel offers a comprehensive solution for professional excavation projects.

Technical Features

Key Components

- Cutter head for soil breaking
- Suction system for material removal
- Integrated crane for material handling

Operational Capabilities

Underwater Excavation, Soil Breaking, Material Removal
