

Cylinder Head Gasket for Internal Combustion Engines

This cylinder head gasket is located between the cylinder head and the cylinder block, also known as the cylinder bed. It fills the microscopic pores between these components to ensure a good seal, preventing cylinder leakage and water jacket leakage.

Product Overview

High-Performance Sealing Solution

This precision-engineered cylinder head gasket is designed for critical sealing applications in internal combustion engines and industrial machinery. It ensures a leak-proof seal that prevents pressure loss, maintaining optimal compression and engine performance even under high-temperature and high-pressure conditions. Built for durability and reliability, it is an essential component for engine repair, maintenance, and industrial machinery assembly.

Technical Details

Model Type	EM190
Part Number	3584363819
Compatible Applications	Internal Combustion Engines, Generator Sets, Industrial Machinery

Performance Features

Key Benefits

- Leak-proof sealing
- High-temperature resistance
- High-pressure tolerance
- Corrosion resistance
- Optimal compression maintenance
