

Cylinder Honing Machine for Auto Engine Repair

This machine hones single line and V-engine cylinders for automobiles, motorcycles, and tractors. It can also be used for honing other machine element holes.

Overview

Precision Cylinder Honing Solution

The 3MB9817 is a specialized cylinder honing machine engineered specifically for professional auto engine repair and rebuilding facilities. It delivers high-precision honing of cylinder bores, ensuring optimal surface finish and strict dimensional accuracy. Built for stability and durability, this machine is equipped with an integrated coolant system to manage temperatures and effectively flush debris during operation.

Technical Specifications

Model	3MB9817
-------	---------

Key Features

Capabilities

- Precision cylinder bore honing
- Optimal surface finish generation
- Dimensional accuracy control
- Integrated coolant management system
- Adjustable fixture system for varied engine blocks

Ideal Applications	Automotive Workshops, Engine Rebuilding Facilities
--------------------	--

Operation

Control System	User-friendly control panel for precise parameter adjustment
----------------	--

Construction

Construction Type

Robust Design • Stable Structure • Durable
