

Cylindrical Cartridge Air Filter

This air filter features a cylindrical shape with a central filtering element. Designed for removing particulate matter from the air, it ensures clean air intake for machinery or equipment.

Overview

High-Efficiency Air Filtration

This cylindrical cartridge air filter is engineered for robust industrial and engineering applications, designed to effectively remove particulate matter from intake air. Its durable construction ensures reliable performance in demanding environments, protecting critical machinery from contaminants. The cartridge-style design facilitates quick and easy replacement, minimizing downtime during maintenance cycles.

Technical Specifications

Construction Materials

- Durable Plastic Housing
- High-Efficiency Filtering Element

Filter Shape	Cylindrical
Design Type	Cartridge
Suitable Applications	Industrial Machinery, Engineering Projects, Foreign Engineering Contracting
