

Cylindrical Filter Housing with Flange

Component used in refrigeration or ventilation systems. It features a cylindrical housing with a flanged top secured by bolts, and a visible mesh or filter element inside.

Product Overview

Industrial Filtration Component

This cylindrical filter housing with flange is designed for high-performance applications in industrial ventilation and refrigeration systems. Engineered for durability, the unit features a reinforced flanged design secured with multiple fastening points to ensure a leak-proof seal under operational pressure. It incorporates an integrated mesh filtration element, making it an essential component for maintaining system air quality and protecting internal mechanisms from debris.

Design Specifications

Housing Shape	Cylindrical
Mounting Method	Flanged with multi-bolt securing
Integrated Filter	Yes

Applications

Primary Applications	Refrigeration, HVAC, Industrial Ventilation, Air Filtration
