

Cylindrical Roller Bearing for Industrial Machinery

This cylindrical roller bearing is suitable for large and medium-sized motors and locomotives. It is also used in machine tool spindles, internal combustion engines, generators, gas turbines, and gear boxes.

Product Overview

Heavy-Duty Cylindrical Roller Bearing

This cylindrical roller bearing is engineered specifically for demanding industrial machinery and heavy equipment applications. Featuring a robust construction with precision-arranged cylindrical rollers, it is designed to manage significant radial loads while maintaining smooth, efficient rotational movement. Crafted from high-quality steel, this component offers exceptional durability and wear resistance for reliable long-term performance.

Technical Specifications

Load Capacity

High Radial Load

Suitable Applications

- Industrial Machinery
- Heavy Equipment
- High-load rotational systems

Material

High-quality steel
