

Cylindrical Screen Pipe for Water Filtration

This screen pipe is designed for water filtering applications within general machinery. Its robust construction ensures reliable performance in demanding industrial environments.

Product Overview

Industrial Filtration Solution

This cylindrical screen pipe is precision-engineered for high-performance water filtration in demanding industrial environments. Its robust construction ensures structural integrity and consistent flow, making it an ideal choice for water treatment and purification systems. Designed for reliability, this component facilitates efficient filtration for general machinery applications.

Technical Specifications

Filtration Features

- Precision-engineered screen openings
- High structural integrity
- Robust industrial-grade construction

Application	Water Filtration, Water Treatment, Industrial Machinery
Shape	Cylindrical
