

D40B14 Double Type B Sprocket

This is a D40B14 double type B sprocket. It is designed for efficient power transmission in mechanical systems.

Product Overview

Precision-Engineered Double Sprocket

The D40B14 Double Type B sprocket is a precision-engineered component designed for high-efficiency power transmission in mechanical systems. Built to withstand demanding industrial environments, this sprocket features accurately machined teeth to ensure smooth, reliable engagement with compatible chains. It is an ideal solution for applications requiring synchronized movement and consistent, high-torque transfer.

Technical Specifications

Sprocket Type	Double Type B
Part Number	D40B14
Key Features	Precision Machined, High Torque, Industrial Grade, Double Row
