

Data Center Ethernet Switches

These data center switches boast abundant data center features and enhanced stacking technology. They also provide comprehensive security control policies.

Overview

High-Performance Data Center Connectivity

The S6860 series is engineered to meet the demanding requirements of modern data center environments. It delivers a flexible, high-density architecture that supports a mix of 10GE, 40GE, and 100GE port configurations. With advanced Layer 2 and Layer 3 capabilities, these switches ensure reliable, secure, and scalable network operations for enterprise-grade infrastructure.

Technical Specifications

Layer Support

- Layer 2
- Layer 3

Supported Port Speeds

10GE, 40GE, 100GE

Features

Advanced Features

VRF • QoS • Enhanced Security • High Density

Operational Benefits

Capability	Benefit
Virtual Routing and Forwarding	Network Segmentation
Quality of Service	Traffic Prioritization
Flexible Port Config	Scalability
