

Data Center Server with Secure Enclosure

This server is designed for robust performance and scalability, ideal for data centers and enterprise solutions. It features a secure front door with a lock and a mesh front panel for optimal airflow and cooling.

Product Overview

High-Performance Enterprise Server

This data center server is engineered for demanding enterprise environments, offering a perfect balance of robust performance and high scalability. It features a specialized secure enclosure with a locking front door to ensure physical data protection and authorized access. The design prioritizes thermal management, utilizing a mesh front panel for superior airflow to keep internal components cool and operational. Its heavy-duty base provides the stability required for reliable deployment in professional data centers.

Physical Design

Security Features	Secure Enclosure, Locking Front Door, Data Protection
Cooling Architecture	Integrated mesh front panel for enhanced ventilation and thermal efficiency
Stability	Yes

Usage Environment

Primary Applications

- Data Centers
- Enterprise IT Solutions
