

Data Logging Device with Ethernet and Wireless Connectivity

This compact device is designed for monitoring and recording data from various sources. It features Ethernet ports for network connectivity and an external antenna for enhanced wireless communication.

Overview

Versatile Data Logging Solution

This data logging device is a compact and versatile solution designed for monitoring and recording data from various sources. It features a robust design with integrated Ethernet ports and an external antenna to ensure stable wireless communication. With clear LED indicators and a dedicated reset button, it provides a reliable and user-friendly experience for professional data management applications.

Connectivity

Network Interfaces

- Multiple Ethernet ports
- Wireless connectivity
- External antenna for enhanced signal
