

Data Transfer Cable with Inline Connector

This data cable is designed for connecting computer components. It features a cylindrical component with a metallic body and blue accents, incorporating a side port with a blue connector.

Product Overview

High-Reliability Data Transfer Solution

This inline data transfer cable component is engineered for seamless integration into complex computer systems. Featuring a robust metallic body with distinct blue accents, it is designed to facilitate stable and reliable data transmission. Its unique inline form factor ensures it fits efficiently within existing hardware architectures, making it an essential component for maintaining signal integrity.

Technical Specifications

Primary Application

Data Transmission • Computer Systems

Connector Configuration

Inline connector with side port

Design Features

Metallic Body, Inline Design, Side Port Integration
