

Data Transmission Cable

This cable is designed for data transmission in computer systems and related peripherals. It features multiple internal conductors encased within protective layers and a yellow outer jacket.

Product Overview

High-Performance Data Transmission

This advanced data transmission cable is engineered for reliable connectivity in complex computer systems and peripheral setups. Featuring multiple internal conductors, likely optical fibers, it ensures high-speed data integrity. The durable construction includes protective layers and a distinct yellow outer jacket, making it suitable for professional-grade networking environments.

Technical Specifications

Jacket Color

Yellow

Construction Features

- Multiple internal conductors
- Protective outer shielding
- High-density layering

Conductor Type

Optical Fiber

Primary Application

Data Transmission, Computer Systems, Peripheral Connectivity
