

DC Inverter TIG Welding Machine

This DC inverter TIG welder is designed for TIG welding applications. The compact welding machine features an on/off switch, open circuit indicator, amperage adjustment knob, and amperage settings ranging from 60 to 180A.

Overview

Professional DC Inverter TIG Welding Solution

This DC Inverter TIG welding machine is engineered for precision and reliability in various welding applications. Featuring a compact and portable design, it is well-suited for professional workshops and field tasks. The unit offers intuitive controls, including adjustable amperage settings and clear status indicators, ensuring efficient operation for diverse metalworking projects.

Technical Specifications

Amperage Range

60 A

Minimum Current

180 A

Maximum Current

Welding Method

DC TIG

Control Panel

Panel Features

- Adjustable amperage control knob
- O.C. (Open Circuit) indicator
- On/Off power switch
- 1T/2T mode selection
- Multiple accessory connection ports
