

DC Inverter TIG/Arc Welding Machine

This DC inverter TIG/Arc welding machine is designed for precision welding applications. It features adjustable amperage control for optimal welding performance on various materials.

Product Overview

Professional DC Inverter TIG/Arc Welding Machine

The TIG200A is a versatile DC inverter TIG and Arc welding machine engineered for precision and performance. Designed for high-quality welding across a range of materials, this machine combines stable arc characteristics with efficient power conversion to ensure minimal spatter. Its compact and robust construction makes it an ideal solution for both professional workshop tasks and demanding DIY applications.

Technical Specifications

Rated Amperage

200 A

Rated Output Current

Welding Modes	TIG, ARC
Power Technology	DC Inverter

Features

Core Advantages

- Adjustable amperage control for precision
- Stable arc characteristics
- High-efficiency power conversion
- Compact and robust portable design
- Integrated safety control systems
