

Deep Fryer Heating Element

This heating element is designed for use in deep fryers. The circular element is constructed from durable metal tubing and ensures efficient, uniform heat distribution for consistent cooking temperatures.

Product Overview

High-Efficiency Heating Solution

This circular heating element is engineered specifically for commercial deep fryers, providing reliable and uniform heat distribution for consistent cooking results. Constructed from high-quality, durable metal tubing, it is designed to withstand the rigorous demands of professional kitchen environments. This component serves as an ideal replacement or repair part to restore optimal performance to existing fryer units.

Technical Specifications

Design Shape	Circular
Terminal Configuration	Two straight terminals
Construction Material	Durable Metal Tubing

Application

Primary Application

Deep Fryer Replacement • Equipment Repair
