

Deep Well Submersible Pump

This high-efficiency submersible pump is designed for deep well applications. Its multi-stage centrifugal design ensures optimal performance and durability.

Product Overview

High-Efficiency Deep Well Solution

This submersible pump is engineered specifically for demanding deep well applications, utilizing a multi-stage centrifugal design to ensure optimal hydraulic performance. Constructed with high-grade stainless steel components, it offers superior corrosion resistance and long-term durability in harsh environments. The system provides a reliable, robust solution suitable for a wide range of professional needs including water supply, agricultural irrigation, and pressure boosting.

Technical Specifications

Materials	Stainless Steel
Design Type	Multi-stage centrifugal

Application Areas

Primary Applications

- Water supply
- Irrigation
- Pressure boosting systems
