

# Deep Well Submersible Water Pump

This deep well submersible pump is engineered for extracting water from deep wells. Its stainless steel construction ensures longevity and resistance to corrosion.

## ADDITIONAL IMAGES

## Overview

### High-Efficiency Deep Well Submersible Pump

The 4SM-F series is a robust submersible pump designed for reliable water intake from wells and reservoirs. Engineered for versatility, it supports domestic, civil, industrial, and irrigation applications with stable performance. Built with high-grade stainless steel components and an oil-filled motor, this pump offers superior corrosion resistance and longevity for complex environments.

### Certifications

CE • CSA • ISO 9001 • RoHS

## Technical Specifications

### Construction Materials

Component	Material / Detail
Stator	100% Copper wire
Rotor Shaft	Welded stainless steel 304
Motor Body	Stainless Steel
Pump Body	Stainless Steel
Impeller	Stainless Steel

### Key Features

- Stainless steel impeller for corrosion resistance
- Oil-filled motor for stable performance
- External controller for easy maintenance
- Food-grade mechanical oil
- Mirror-treated, wear-resistant rotor
