

# Defrosting Heater Element with Serpentine Coil

This defrosting heater element is designed for efficient and reliable defrosting applications. It features a durable construction with a metallic heating coil arranged in a serpentine pattern for optimal heat distribution.

## Overview

### High-Efficiency Defrosting Component

The JS-02D defrosting heater element is engineered for reliable and efficient ice removal in refrigeration systems. Featuring a durable metallic heating coil arranged in a serpentine pattern, it ensures optimal heat distribution across the application area. This component is designed for seamless integration, equipped with electrical leads for straightforward installation in professional cooling environments.

## Technical Details

Model Number	JS-02D
Coil Configuration	Serpentine
Construction Material	Metallic
Primary Application	Refrigeration Systems, Defrosting, Ice Removal
Connection Type	Electrical leads
