

Depressed Center Grinding Wheel

These grinding wheels contain a high grain concentration for aggressive grinding action. The material mix and fiberglass construction ensures durability, safety, and long life.

Product Overview

High-Performance Grinding Solution

These depressed center grinding wheels are engineered for professional metalworking applications, including weld removal, deburring, and surface preparation. Designed for use with angle grinders, the recessed center allows for flush grinding and improved access in confined spaces. The construction utilizes high-performance abrasive grains and a durable fiberglass reinforcement to ensure safe, aggressive material removal and an extended service life.

Key Features

Performance Features

- High grain concentration for aggressive grinding action
- Smoother running operation
- High-performance grain for extended service life
- Durable material mix

Construction & Safety

Material Composition

Fiberglass Reinforced, High-Performance Abrasive Grain

Application

Common Applications

Weld Removal • Deburring • Surface Preparation • Metal Grinding
