

Desktop PC Power Supply Unit

Power supply unit designed for desktop computers. It provides stable power to the motherboard, CPU, GPU, and storage devices.

Product Overview

High-Performance Power Delivery

This desktop PC power supply unit is engineered to provide stable and reliable power to essential computer components, including the motherboard, CPU, GPU, and storage devices. Designed for longevity and safety, it features built-in protections against overvoltage, overcurrent, and short circuits. The integrated cooling fan ensures efficient heat dissipation, maintaining optimal operating temperatures during use.

Technical Features

Key Features

- Integrated cooling fan for heat dissipation
- Overvoltage protection
- Overcurrent protection
- Short circuit protection
- Stable power delivery

Quality

High Quality
