

Diamond Abrasive Grinding Wheels

These high-precision diamond grinding wheels are suitable for various grinding applications. The durable wheels have diamond abrasive particles bonded to a metallic or resin matrix, providing consistent performance and precise grinding capabilities.

Product Overview

High-Precision Grinding Solutions

These diamond abrasive grinding wheels are engineered for high-precision material removal across a variety of demanding industrial applications. Featuring durable diamond abrasive particles bonded to either metallic or resin matrices, they ensure consistent performance and an exceptionally long service life. Designed for versatility, they are available in multiple configurations to suit sharpening, shaping, and finishing tasks on hard materials.

Technical Details

Available Configurations

- Flat
- Cup
- Dish

Abrasive Material	Diamond
Bonding Matrix Options	Metallic, Resin

Applications

Compatible Materials

Carbide • Ceramics • Glass

Primary Functions

- Sharpening
- Shaping
- Finishing

Performance Features

Key Performance Indicators

1 High

Wear Resistance

1 High

Material Removal Efficiency
