Diamond Core Drill Bit for Concrete

This diamond core drill bit is engineered for drilling precise holes in concrete and masonry. It features a durable steel barrel, laser-welded diamond segments for fast cutting, and efficient removal of debris.

Product Overview

Professional Diamond Core Drill Bit

These diamond core drill bits are engineered for high-precision drilling in the most demanding masonry environments. Featuring a durable steel barrel and laser-welded segments, they ensure rapid penetration and consistent performance. Designed for versatility, this tool is ideal for reinforced concrete, asphalt, and brick applications, ensuring efficient debris removal throughout the process.

Technical Specifications

Design Features

- Durable steel barrel construction
- Laser-welded diamond segments
- Engineered for fast cutting speeds
- Optimized for efficient debris removal

Key Attributes

1 Laser
Segment Welding

Compatible Materials	Reinforced Concrete, Concrete, Asphalt, Brick, Masonry
