

Diamond Grinding Cup Wheel

This diamond grinding cup wheel is engineered for aggressive material removal and surface preparation. It features a durable steel body with diamond-impregnated segments, optimized for grinding concrete, stone, and masonry materials.

Product Overview

High-Efficiency Grinding Performance

This diamond grinding cup wheel is engineered for aggressive material removal and professional surface preparation. Featuring a durable steel body with high-quality diamond-impregnated segments, it ensures efficient grinding on concrete, stone, and various masonry materials. The segmented design promotes optimal air cooling, which reduces heat buildup during operation and significantly extends the service life of the tool.

Technical Specifications

Design Features

- Segmented design for heat dissipation
- Brazed diamond segments for maximum strength
- Integrated holes to reduce vibration
- Durable steel body construction

Compatible Materials

Concrete, Stone, Masonry

Tool Compatibility

Angle grinders and compatible power tools
