

Diamond Grinding Cup Wheel

This diamond grinding cup wheel is designed for efficient material removal. Its durable construction and high-quality diamond segments provide long-lasting performance and aggressive grinding action.

Product Overview

Professional Grinding Performance

This professional-grade grinding diamond cup wheel features a high-performance segmented tip design engineered for efficient material removal. The wheel is built with a reinforced steel body that undergoes special stress treatment, ensuring superior durability and resistance to deformation. It is specifically designed to minimize operational noise and reduce cutting resistance, providing a stable and reliable solution for intensive surface preparation tasks.

Technical Specifications

Bore Size	22.23 mm
Row Configuration	Single Row

Features

Key Benefits

- Heat-resistant design to prevent overheating
- Engineered to prevent blade deformation
- Reduced noise and cutting resistance
- Advanced segment bonding for longevity

Application

Suitable Materials	Ceramics, Granite, Marble, Cement
--------------------	-----------------------------------

Packaging

Available Packaging

Double blister • Plastic hanger • Cardsleeve • Color box
