

Diamond Grinding Cup Wheel for Concrete Stone

This diamond grinding cup wheel is designed for aggressive material removal and surface preparation. It features a durable steel body and high-quality diamond segments for long life and efficient grinding.

Product Overview

Professional Grinding Performance

This diamond grinding cup wheel is engineered for aggressive material removal and precision surface preparation. Designed for versatility, it effectively handles granite, natural stone, concrete, and various masonry materials. The robust steel body and high-quality diamond segments ensure extended service life, while the specialized turbo design facilitates rapid stock removal and efficient cooling.

Technical Specifications

Design Features

- Spiral/Turbo segment configuration
- Integrated ventilation holes for dust removal
- Heat reduction design
- Durable steel body construction

Primary Applications

Concrete Grinding, Stone Leveling, Coating Removal, Masonry Surface Prep

Performance Metrics

Key Performance Indicators

1 High

Efficiency

1 Optimized

Heat Management
