

Diamond Grinding Segment for Concrete

This diamond grinding segment is designed for grinding soft to hard concrete and other masonry materials. Super coarse options are available for specialized performance requirements.

Product Overview

High-Performance Diamond Grinding Segment

This diamond grinding segment is engineered for aggressive material removal and efficient surface preparation on concrete and stone. Designed with two V-shaped segments on a durable metal base, it balances cutting speed with longevity to ensure consistent results. The robust construction is ideal for professional floor grinding machines and handheld grinders, helping to reduce downtime and improve site productivity.

Technical Specifications

Outer Diameter	10 inch
Segment Height	10 mm
Arbor Configuration	3xM6
Segment Number	2

Bond Options

Available Bond Types

- Coarse diamond with soft bond
- Coarse diamond with medium hard bond
- Coarse diamond with hard bond

Compatibility

Suitable Surfaces	Concrete, Stone
