

Diamond Grinding Wheels

Diamond grinding wheels are engineered for material removal and finishing work. They are suitable for use on ceramics, glass, stone, and composites.

Product Overview

High-Precision Grinding Solutions

These diamond grinding wheels are engineered for demanding material removal and finishing applications, offering consistent performance and an extended operational lifespan. Featuring a durable construction with precisely embedded diamond particles, they are optimized for efficiency and precision. The design includes features for optimal coolant flow and efficient swarf removal, ensuring a clean and cool grinding process for professional results.

Technical Specifications

Performance Features

- High-precision diamond particle embedding
- Durable construction for extended lifespan
- Optimized for coolant flow
- Efficient swarf removal

Application Type

Material Removal • Finishing

Compatible Materials

Ceramics, Glass, Stone, Composites
