

Diamond Lapping Paste

Diamond paste is a polishing compound containing finely ground diamond particles in a liquid binder. It is available in syringes or spray bottles, sometimes with color-coded grit sizes for different polishing needs.

Product Overview

Precision Polishing Solution

Diamond lapping paste is a high-performance abrasive compound engineered for the fine polishing and sharpening of diverse surfaces. Composed of precision-ground diamond particles suspended in a stable carrier fluid, it ensures consistent cutting action and lubrication. This versatile compound is ideal for professional applications, including mold polishing, tool and die making, and the finishing of optical components.

Technical Details

Application Methods

- Syringe application
- Pump-spray bottle

Primary Benefits

Precision Sharpening • Surface Polishing • Surface Cleaning • Color-Coded Grit Selection

Common Industrial Uses

Application Area	Function
Mold Polishing	Finishing
Tool and Die Making	Precision Shaping
Optical Components	Surface Refinement
Metal Blades	Sharpening & Polishing

Compatible Materials

Metal, Ceramic, Glass, Mineral Surfaces
