

Diamond Profile Wheel for Stone Shaping

This profile wheel is designed for shaping and finishing hard materials such as stone, concrete, and ceramics. The wheel features a durable metal body with diamond-impregnated segments for efficient material removal.

Product Overview

Professional Stone Shaping Solution

This high-performance diamond profile wheel is engineered for precision shaping and finishing of hard materials including stone, concrete, and ceramics. Featuring a robust metal body with diamond-impregnated segments, it ensures rapid material removal and extended tool longevity. Designed for professional use, this wheel excels at creating intricate edges and contours with high efficiency across various industrial power tools.

Technical Specifications

Tool Compatibility

- Angle grinders
- Compatible industrial power tools

Compatible Materials

Stone, Concrete, Ceramics

Construction Details

Durable metal body with diamond-impregnated segments

Applications

Primary Applications

- Edge shaping
- Intricate profiling
- Contour finishing
