

Diamond Saw Blade for Stone Cutting

Diamond saw blades are used for cutting stone blocks in the quarrying and stone processing industries. These blades are mounted on heavy-duty cutting machines and use water to cool the blade and reduce friction.

Product Overview

Professional Diamond Saw Blade

This diamond-tipped saw blade is engineered for high-performance stone processing, including granite and marble applications. Designed for heavy-duty industrial cutting, it ensures precision and durability in demanding quarrying environments. The blade is optimized for wet cutting operations to maintain temperature control and debris removal during use.

Technical Specifications

Cutting Method

Wet Cutting

Compatible Materials

Granite, Marble, Stone Blocks

Primary Industry

Quarrying and Stone Processing
