

Diamond Segmented Concrete Grinding Cup Wheel

This grinding cup wheel features diamond segments for concrete grinding and surface preparation. It is designed with a durable steel body and ventilation holes for cooling during use.

Product Overview

Diamond Segmented Concrete Grinding Cup Wheel

This diamond segmented cup wheel is engineered for efficient concrete grinding and surface preparation. Featuring a durable steel body and a specialized segmented diamond matrix, it is designed for consistent material removal. The integrated ventilation holes ensure optimal cooling during heavy-duty operation, making it suitable for smoothing rough surfaces, removing coatings, and leveling concrete floors.

Technical Specifications

Design Features

- Segmented diamond matrix
- Durable steel body
- Ventilation holes for cooling

Primary Use Cases

Surface Preparation • Smoothing Rough Surfaces • Coating Removal • Floor Leveling

Compatible Materials

Concrete, Field Stone
