

Diamond Wire Saw for Stone and Concrete Cutting

This diamond wire saw is engineered for precision cutting of hard materials, including stone, concrete, and glass. The saw features diamond-impregnated beads along a steel cable, ensuring efficient and clean cuts for quarrying, construction, and demolition applications.

Overview

High-Performance Cutting Solution

This diamond wire saw is engineered for the precision cutting of hard materials, including stone, concrete, and glass. Utilizing diamond-impregnated beads spaced along a durable steel cable, it delivers efficient and clean cuts across various applications. Its flexible design makes it an ideal choice for quarrying, construction, and demolition projects, even in tight spaces or for complex shapes.

Technical Specifications

Primary Applications

- Quarrying
- Construction
- Demolition
- Complex Shape Cutting

Design Features

Diamond-Impregnated Beads • Flexible Steel Cable • Long Service Life

Compatible Materials

Stone, Concrete, Glass

Customization Options

Available in different diameters and bead configurations to match specific cutting requirements.
