

Die Cast Aluminum Radiator

This radiator is made from ADC12 aluminum alloy, known for its corrosion resistance. It is produced through an 800T automatic die-casting process.

Product Overview

High-Efficiency Thermal Solution

This high-precision die-casting aluminum radiator is engineered for superior heat dissipation in both residential and commercial heating systems. Its multi-section construction maximizes surface area to ensure consistent and comfortable thermal performance. Built with a durable aluminum alloy, this radiator offers excellent corrosion resistance and energy efficiency for long-lasting reliability.

Technical Specifications

Material	Aluminum alloy
Construction	Die-casting

Key Features

Performance Attributes	Corrosion Resistant, High Thermal Efficiency, Multi-Section Design, Energy Efficient
------------------------	--

Application

Suitable Environments

- Residential heating
- Commercial heating systems
