

Diesel Engine Driven Water Pump

This diesel engine driven water pump is designed for high volume water transfer. It features a robust diesel engine for reliable operation in remote locations.

Overview

High-Performance Diesel Water Pump

This diesel engine driven water pump is engineered for high-volume water transfer applications in demanding environments. Designed for reliability in remote locations, it combines a robust diesel engine with durable construction to ensure consistent operation. Its compact design offers excellent portability, making it an ideal solution for agricultural irrigation, construction sites, and emergency water supply needs.

Performance Metrics

Key Performance Indicators

1 High

Flow Rate

1 Efficient

Fuel Efficiency

Applications

Suitable Applications

Irrigation, Construction, Emergency Water Supply, Remote Operations

Design & Build

Design Features

- Robust diesel engine for reliability
- Durable construction materials
- Compact design for portability
