

Diesel Engine Fire Pump for Water Transfer and Fire Suppression

This self-priming centrifugal pump is powered by a diesel engine. It is designed for high-volume water transfer and fire suppression applications.

Overview

High-Performance Diesel Fire Pump

This self-priming centrifugal pump is engineered for demanding water transfer and fire suppression tasks. Powered by a reliable diesel engine, it features a robust frame and durable pump housing to ensure long-term operational stability. Designed for versatility, the unit is ideal for emergency response, agricultural irrigation, and industrial water supply systems.

Technical Specifications

Pump Type	Self-priming centrifugal
Power Source	Diesel Engine
Starting Mechanism	Electric Start

Features

Key Features	Robust Frame, Electric Start, Durable Housing, Stable Base, Self-priming
--------------	--

Applications

Primary Applications

- Emergency Fire Response
- Agricultural Irrigation
- Industrial Water Supply
- High-Volume Water Transfer

Included Equipment

Included Components

Battery • Sturdy Base
