

Diesel Engine Fuel Injection Pump

This high-pressure fuel injection pump is designed for diesel engines with a maximum displacement of 1.5 liters per cylinder and a maximum output of 45kW per cylinder. It complies with Euro 1 emission standards.

PW 3000 Pump
Max Displacement 1.5 Liters/cylinder
Max Output Power 45KW /cylinder
Emission: Euro 1

Product Overview

Industrial High-Pressure Fuel Injection Pump

The PW3000 is a robust fuel injection pump engineered for heavy-duty diesel engine applications. Designed for consistency and performance, this unit provides efficient fluid transfer in demanding operational environments. It supports high output power requirements while adhering to established emission standards for industrial and automotive use.

Technical Performance

Emission Standard

Euro 1

Max Displacement	1.5 L/cyl
Max Output Power	45 kW/cyl

Application Details

Suitable Applications

- Industrial diesel engines
- Automotive diesel engines
- Heavy-duty applications
