

Diesel Engine Rotary Fuel Injection Pump

This rotary distribution injection pump is engineered for diesel engines. It utilizes a central rotor to distribute fuel to each cylinder, ensuring reliable and efficient fuel delivery.

Product Overview

Rotary Distribution Injection Pump

This rotary distribution injection pump is engineered specifically for diesel engine applications. It features a central rotor mechanism designed to distribute fuel precisely to individual cylinders, ensuring reliable engine performance. Built with a robust housing and integrated control valves, this unit is designed for durability and efficient fuel delivery in demanding diesel environments.

Technical Specifications

Key Components

- Central distribution rotor
- High-pressure fuel lines
- Control valves
- Robust housing

Pump Type	Rotary distribution injection pump
Application	Diesel Engines
