

Diesel Engine Water Pump Set

This diesel engine water pump set is designed for water transfer and irrigation purposes. It features a diesel engine coupled with a centrifugal pump and is mounted on a wheeled frame for portability.

ADDITIONAL IMAGES

Overview

High-Efficiency Diesel Water Pump

This portable diesel-powered water pump set is engineered for high-volume water transfer across agricultural, construction, and industrial sectors. Featuring a robust single-cylinder, air-cooled diesel engine coupled with a durable centrifugal pump, it provides reliable performance in demanding environments. Its mobile design, complete with a wheeled frame, ensures ease of maneuverability and quick deployment for irrigation or dewatering tasks.

Technical Specifications

| | |
|------------------|---|
| Engine Type | Single-cylinder, air-cooled diesel engine |
| Pump Mechanism | Self-priming centrifugal |
| Housing Material | Cast iron |
| Starting System | Recoil start |

Performance Metrics

| | |
|------------------|--|
| Key Capabilities | Self-Priming, Portable, Air-Cooled, Industrial Grade |
|------------------|--|

Applications

Suitable Applications

- Agricultural irrigation
- Dewatering
- General water transfer
- Construction site drainage
