

Diesel Engine with Crankshaft

This is a diesel engine with a crankshaft. It is suitable for power generation, marine propulsion, or heavy machinery operation.

Product Overview

Industrial Diesel Engine and Crankshaft Assembly

This offering includes a high-capacity diesel engine and a matching crankshaft, both maintained in good condition for immediate industrial use. The engine is designed for heavy-duty applications, delivering a robust power output of 2600PS at 600RPM. These components are ideal for buyers seeking reliable power generation or marine propulsion solutions from a proven 1981 production series.

Technical Specifications

Engine Type Compatibility

8DS-32 • 8DSM-32

Rated Power

2600 PS

Power Output

Rotational Speed

600 RPM

Engine Speed

Year of Manufacture

1981
